

IN THE SPECIFICATION

Please amend the paragraph beginning at page 14, line 27, as follows:

A conductive material used for the unit conductive substrates 12A, 12B and 12C that form a part of the collector portion 12 and the unit conductive substrates 22A, 22B and 22C that form a part of the collector portion 22 should preferably be well conductive, ensure the desired strength, and be easy to process. For instance, stainless steel, cold-rolled steel sheet, aluminum, copper, and titanium could be used. The connecting hinges 31 may be the same material as the conductive substrates 12A, 12B, 12C, 22A, 22B and 22C.
